Name: Keey | 1
Period: _____

Absolute Value Word Problems

- 1) A machine is used to fill each of several bags with 16 ounces of sugar. After the bags are filled, another machine weighs them. If the bag weighs .3 ounces more or less than the desired weight, the bag is rejected. Write this equation to find the heaviest and lightest bag the machine will approve.

$$.3 \geq |x - 16| \quad 15.7 \text{ to } 16.3$$

- 2) The average number of seeds in a package of cucumber seed is 25. The number of seeds in the package can vary by three. What are the maximum and minimum number of seeds that could be in a package?

$$3 \geq |x - 25| \quad 22 \text{ to } 28$$

- 3) The mean distance of the earth from the sun is 93 million miles. The distance varies by 1.6 million miles. What are the maximum and minimum distances of the earth from the sun?

$$1.6 \geq |x - 93| \quad 91.4 \text{ to } 94.6$$

- 4) Leona was in a golf tournament last week. All of her four rounds of golf were within 2 strokes of par. If par was 72, what are the maximum and minimum scores that Leona could have made in the golf tournament?

$$2 \geq |x - 72| \quad 70 \text{ to } 74$$

- 5) Victor has a goal of making \$75 per week at his after-school job. Last month he was within \$6.50 of his goal. What are the maximum and minimum amounts that Victor might have made last month?

$$6.50 \geq |x - 75| \quad 68.50 \text{ to } 81.50$$

- 6) Members of the track team can run 400 m in an average time of 58.2 seconds. The fastest and slowest times varied from the average by 6.4 seconds. What were the maximum and minimum times for the track team?

$$6.4 \geq |x - 58.2|$$

- 7) Amtrak's annual passenger revenue for the years 1980-2000 is modeled approximately by the formula $R = -40|x - 11| + 990$ where R is the annual revenue in millions of dollars and x is the number of years since January 1, 1980. In what years was the passenger revenue \$790 million?

$$790 = -40|x - 11| + 990 \quad x = 16$$

$$5 = |x - 11| \quad x = 6$$

year. 1974 : 1996

Write absolute value inequalities for each and solve.

A company sells bags of oranges. Each bag of oranges should weight 8.5 pounds. Each bag can vary by at most 1.5 pounds. The company ships their oranges with 10 bags of oranges to a box. What are the unacceptable weights of 1 box of oranges?

$$1.5 \geq |x - 8.5|$$

$$7 \text{ to } 10$$

$$70 \text{ lbs to } 100 \text{ lbs}$$

Sarah has \$15. She knows that Blake has some money and it varies by at most \$5 from the amount of her money. Write an absolute value inequality that represents this scenario. What are the possible amounts of money that Blake can have?

$$5 \geq |x - 15|$$

$$10 \text{ to } 20$$

Solve.

(check your answers)

$$3 \left| \frac{x}{2} - 4 \right| + 5 = 17$$

$$3 \left| \frac{x}{2} - 4 \right| = 12$$

$$\left| \frac{x}{2} - 4 \right| = 4$$

$$\frac{x}{2} - 4 = 4$$

$$\frac{x}{2} - 4 = -4$$

$$x = 80$$

$$x = 0$$

$$\frac{1}{2} |2x + 6| = -8$$

$$|2x + 6| = -16$$
